Weight	60 kg.

Sprayer follow requirements EC Norm 2009/127 for sustainable use of phytopharmaceuticals

Sanitization starts from a simple principle: bringing contaminated environments back to a compliance state with all hygiene and health standards, through appropriate operations and procedures. Especially by eliminating parasites or other pathogens present. These equipped machines pumps allow you to use the main sanitization products with the possibility to spray up to 3-7 meters in height (depending on the version) without other additional accessories.
